- = Not included in the scope of series production or not possible | P = optionale Packageausstattung

[illegible]

GENERAL INSTRUCTIONS CONCERNING THE WEIGHT SITUATION OF CAMPERS

- Special fittings (additional equipment) increases the mass in running order and reduces the payload. The weight of the additional equipment can be ascertained from the information in our prospectus or can be obtained by asking your dealer/seller.
- The maximum number of persons indicated in each case depends on the weight and the mass on the axles. This number may be less if special fittings (=optional equipment/additional equipment) and accessories are installed, and so individual seats cannot be used in order to make way for additional payload. If all seats are to be used it will be necessary to dispense with some payload. The technically permissible total mass and the mass on the axles may not be exceeded.
- The possible payload is reduced when special fittings (= optional equipment/additional equipment) and accessories are installed. Furthermore the possible payload not only depends on the mass in running order, the actual vehicle mass, the weight of the accessories and the technically permissible total mass, but also on the mass on the respective axles. In order to take full advantage of the possible payload for the vehicle there must be an appropriate mass distribution related to the mass on the axles.

Installation of extra components such as roof cases, enginebike carriers, air conditioning equipment, blinds or bicycle carriers into the vehicle supplied

with living space superstructure can change the dimensions and characteristics of the vehicle. In addition, the unladen weight changes if special equipment is installed. Please note the permissible axle load and load reserves. If several items of extra equipment are combined on the vehicle roof, the overall load capacity and the space available must be taken into consideration.

Eura Mobil GmbH does not accept responsibility for any negative effects to the vehicle caused by installation of additional equipment not consisting of ORIGINAL KARMANN-MOBIL PARTS and through installation of additional equipment in a manner which is not consistent with KARMANN-MOBIL GUIDELINES.

All information provided in this brochure refers to the products listed here and does not apply to other products provided by Eura Mobil GmbH. The models pictured in this brochure show the furnishings for the German market. In some cases, they also include special equipment and accessories not included in the standard scope of delivery. All weights are values with a variation of +/- 5 percent. Deviations from the model variants and equipment described here could be possible due to legal regulations in different countries. Please consult your Eura-Mobil dealer pertaining to the exact scope and the available program of model-specific as well as model-independent equipment. Subject to errors and changes of construction, equipment and special equipment. All previous catalogues lose their validity with publication of this brochure.

The mass in running order according to Article 2, item 4 a) of Commission Regulation (EU) No 1230/2012 is, unless otherwise regulated, defined as:

- the mass of the vehicle fitted with the standard equipment in accordance with the manufacturer's specifications (incl. on-board tools)
- + fuel tank(s) filled to at least 90 % of its or their capacity/ies
 - + 75 kg (mass of the driver)
 - + Aluminium liquefied gas bottle (5 kg capacity) filled to 100%
 - + Freshwater tank filled to 100%
- = mass in running order

The technically permissible maximum laden mass according to Article. 2, item 7 of Commission Regulation (EU) No 1230/2012 is defined as: The maximum mass of the vehicle when fully loaded according to the manufacturer.

The maximum permissible load as intended by the catalogue information is defined as: Technically permissible maximum laden mass – mass in running order = maximum permissible load

Issue: May 2022
