**KARMANN**

GENERAL INFORMATION REGARDING WEIGHT IN MOTORHOMES

- Special features (additional features) increase the weight in the vehicle's ready-to-drive state and reduce the cargo capacity. The weight of the additional equipment is detailed in our brochure information or your dealer / seller can tell you.
- The maximum number of persons permitted depends on the weight and axle load. It can be reduced if special features (= special equipment / additional equipment) and accessories are installed, so in the interests of cargo loading capacity certain seats cannot be used. If all seats are to be used, some cargo capacity may need to be foregone. The technically permissible overall weight and axle loads must not be exceeded.
- The cargo loading capacity is reduced if special features (= special equipment / additional equipment) and accessories are installed. The cargo loading capacity is also not only dependent on the weight in the vehicle's ready-to-drive state, the actual vehicle weight, the weight of the accessories and the technical permissible overall weight, but also on the respective axle loads. In order to use the maximum possible cargo capacity based on the vehicle's technology, suitable, axle load-dependent weight distribution is required.

Installing additional parts, such as roof boxes, motorcycle racks, air conditioning equipment, awnings, bicycle racks, in the vehicle equipped with a living area may change the vehicle's dimensions and properties. The vehicle's unladen weight will also increase after special features have been installed. Please also

note the permitted axle loads and storage capacity for cargo. When combining several accessory components on the vehicle roof, the total load capacity and the available space must be taken into account.

Eura Mobil GmbH accepts no liability for any negative effects that may occur as a result of installing such additional equipment in the vehicle, unless they are ORIGINAL KARMANN-MOBIL PARTS and are installed or attached in accordance with the KARMANN-MOBIL GUIDELINES.

All of the information in this brochure relates to the products listed herein and does not apply to any other products of Eura Mobil GmbH. The models illustrated in this brochure show the features available in Germany. They may also contain special features and accessories that are not included with the standard scope of delivery. All weights quoted are values with a fluctuation limit of +/- 5 per cent. Due to legal regulations, differences from the model variations described here and equipment featured may be necessary in certain countries. Latest update: In light of the current supply chain problems, the brochure also shows some models from the 2023 season that may differ in terms of their feature details from the 2024 season models. Please ask your Karmann Mobil dealer about the exact scope and range available of model-specific and model-neutral features. Subject to errors and changes in design, equipment and special features. The publication of this brochure renders all previous catalogues invalid.

Unless otherwise regulated, weight in ready-to-drive state as per Article 2 (4a) Regulation (EU) 1230/2012 is defined as:

Vehicle's dimension with standard equipment according to manufacturer specifications (incl. vehicle tool kit)

- + fuel tank filled to 90%
- + 75 kg (weight of the driver)
- + fluid gas bottle (filling capacity of 5 kg) made of aluminium filled to 100%
- + fresh water tank filled to 100%
- + 230 V charging cable for superstructure battery
- = weight in ready-to-drive state

The technically permissible overall weight according to Article 2 (7) Regulation (EU) 1230/2012 is defined as: The vehicle's maximum weight when loaded as provided by the manufacturer.

Pursuant to the information provided in the catalogue, the maximum cargo loading capacity is defined as: Technically permissible overall weight - weight in ready-to-drive state = maximum cargo loading capacity
